Address

6/3/1 , AA Manal Road ,
Balarengapuram ,
Madurai-09

Education

2019 - 2023

**Mepco Schlenk Engineering
College**

2018 - 2019

**V.H.N. Higher Secondary
School**

Certified Skills

- Autodesk Revit Architecture
- Autodesk Revit Structure
- Autodesk AutoCAD
- Navisworks

Additional Skills

- Autodesk Recap Pro
- BIM 360
- Bluebeam

BALAJI R M

BIM MODELER

Experienced and detail-focused BIM Modeler with 2 years of hands-on expertise in developing and managing intricate building models using tools like Revit, Navisworks, and AutoCAD. Skilled in producing accurate 3D models, coordinating across various disciplines, and supporting seamless project execution. Proven ability to work collaboratively with architects, engineers, and construction professionals to streamline workflows, resolve design issues, and boost project efficiency. Well-versed in project coordination and clash detection, with a strong dedication to delivering quality outcomes on schedule and within scope.

ROLES & RESPONSIBILITIES

- Proficient in using BIM 360 for efficient collaboration and centralized project information management.
- Ensured adherence to LOD standards, managing model progression from LOD 100 (design) to LOD 500 (as-built) with strong attention to accuracy and detail.
- Collaborated with architects and engineers to develop precise BIM models that reflect design intent and meet project requirements.
- Coordinated with multidisciplinary teams to perform clash detection and resolve design issues, ensuring seamless integration across all disciplines.
- Ensuring quality control and management.
- Assisted in generating quantity take-offs, schedules, and supported the implementation of the BIM Execution Plan (BEP) for standardized workflows and processes.

WORK EXPERIENCE

2023 - CURRENT PINNACLE INFOTECH
SOLUTIONS / INDIA

• THE AVENUE MALL / RIYADH, SAUDI ARABIA

- Developed BIM models from design to construction level (LOD 300 to LOD 400) for multiple sub-modules across various project levels.
- Produced detailed framing and general arrangement drawings.
- Coordinated with MEP teams to create builder's workshop drawings.
- Performed clash detection and resolved design conflicts using Navisworks to ensure integrated project delivery.
- Evaluated project inputs and raised RFIs to clarify missing or insufficient information.
- Developed and maintained view templates to streamline documentation and ensure consistency.

Language

- Tamil
- English
- Sourashtra

INTERESTS

- Exploring New Skills
- Playing Cricket
- Reading Comics

THE KING SALMON KNOWLEDGE DISTRICT / RIYADH, SAUDI ARABIA

- Led the development of BIM models to LOD 400, ensuring accuracy and precision for both fabrication and on-site installation.
- Produced detailed shop drawings, including wall partitions, wall sections, general arrangement (GA) drawings, reflected ceiling plans (RCPs), and flooring layouts.
- Actively participated in coordination meetings with multidisciplinary teams, identifying and resolving design conflicts to ensure seamless project progression.
- Collaborated closely with facility management teams to maintain and update BIM models, ensuring ongoing relevance for operational and maintenance purposes.
- Utilized Navisworks for clash detection, facilitating early identification of design discrepancies and minimizing construction delays.

NEW SCIENCE CENTRE / SINGAPORE

- Enhanced the structural BIM model from LOD 250 to LOD 350, incorporating detailed elements, including the stair demarcation.
- Developed shop drawings for staircases, floor plans, and MEP layouts, in strict adherence to BIM Execution Plan (BEP) standards.
- Collaborated with project teams to resolve technical challenges and improve cross-disciplinary coordination.
- Utilized Navisworks for model federation, clash detection, and reporting, while also creating parametric door and window families during project initiation.

DUBAI INTERNATIONAL AIRPORT

- Transformed 3D laser scan point cloud data into accurate BIM models using Revit and Recap Pro, ensuring precise alignment with existing site conditions, including structural irregularities and deformations.
- Performed clash detection in Navisworks to identify and resolve discrepancies between actual site conditions and the intended design.
- Produced detailed 2D documentation (floor plans, elevations, sections) based on LOD 500 models, ensuring full project documentation accuracy.

AL-QURAIN / DIRIYAH, SAUDI ARABIA

- Produced detailed shop drawings for staircases, framing layouts, general arrangements (GA), core wall details, and column & wall layouts, and developed accurate MEP layouts through coordinated efforts with project stakeholders to address design issues.
- Collaborated with multidisciplinary teams to identify and resolve clashes using Navisworks, enhancing design coordination and improving overall accuracy.
