To utilize Building Information Modeling (BIM) tools and methodologies to create, manage, and coordinate accurate 3D models of building and infrastructure projects. The BIM Modeler ensures the digital representation of the physical and functional characteristics of a project, supporting design, construction, and facility management through precise, data-rich models that improve collaboration, reduce errors, and enhance overall project efficiency.

Work Experience

BIM Modeler (HVAC,Fire Fighting)

Pinnacle infotech

January 2025 to Present

Developed 3D BIM models for fire protection systems (sprinkler, standpipe, fire hose reels, fire extinguishers) using Revit, AutoCAD MEP, Navisworks, and other BIM tools.

Coordinated with multidisciplinary teams (MEP, architecture, structural) to ensure proper integration of fire fighting systems into the overall building model.

Ensured the fire fighting model adhered to project-specific requirements and standards (e.g., NFPA, local codes).

Created shop drawings, coordinated layouts, and detail drawings for fire sprinkler systems, riser diagrams, and fire pump rooms.

BIM modeler (HVAC)

Skyline institute

January 2024 to May 2024

Hands-on experience with Revit MEP, AutoCAD MEP, Navisworks Manage, and BIM 360 for HVAC modeling and coordination.

Familiarity with Clash Detection using Navisworks and resolving clashes with architectural, structural, and MEP disciplines.

Use of Families and Parametric Components to develop HVAC systems like AHUs, FCUs, ducts, diffusers, grilles, VAV boxes, etc.

Creating coordinated HVAC models that are fully integrated with other trades (electrical, plumbing, fire protection).

Preparation of shop drawings, sleeve drawings, and as-built models.

Education

B.E. in Mechanical Engineering

M.E.T.Engineering College

January 2020 to January 2020
