

Luis Romero

BIM Manager & Civil Engineer

The knowledge of an engineer, the logic of a programmer,
the eye of a designer, and the passion of an artist.

MY FREELANCE
WEB PAGE

Hi! I'm Luis Romero, a Civil Engineer from Universidad Panamericana (Mexico), class of 2021. I'm about to begin a Master's Degree in Structural Engineering at the same university (starting August 2025), to further deepen my technical knowledge. Since graduating, I've been running my own company as a BIM Modeler and BIM Manager, leading a remote team of up to five drafters and delivering high-quality models and drawings for architectural and industrial projects.

I bring 6 years of experience in 3D modeling and BIM coordination, with a strong eye for detail, speed, and design quality. I'm passionate about building smart models and clear, construction-ready documentation.

SOFTWARE SKILLS

BIM

BIM 360

Autodesk Construction Cloud
Docs - Design - Coordinate

Drone Deploy

Pix 4D

Programming

Visual Basic

Google Script

Engineering

NeoData

Project

SAP 2000

Revit

TEKLA STRUCTURES

Design

Adobe Illustrator

Adobe Photoshop

Revit Arquitectura

Revit Estructural

Revit MEP

Revit Creación de Familias

ReCap

Dynamo - Python

AutoCAD

Pr Xd

Ae

Adobe Creative Suite

ZBrush

EDUCATION

Universidad Panamericana GDL
Master's Degree in Structural Engineering
(Starting August 2025)

Universidad Panamericana GDL
Bachelor's Degree in Civil Engineering
(2016-2021)

Luis Romero

BIM Manager & Civil Engineer

EXPERIENCE

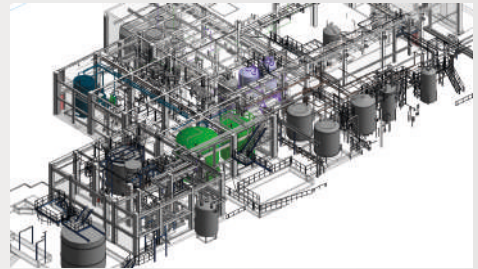

OREBIM - FOUNDER & BIM MANAGER (2019 - Present)

Remote BIM Modeling & Drafting Studio – Guadalajara, Mexico.

Founded and led a remote BIM services company supporting US and Mexican construction firms. Supervised a team of 2–5 drafters, managing over 150 projects across various industries:

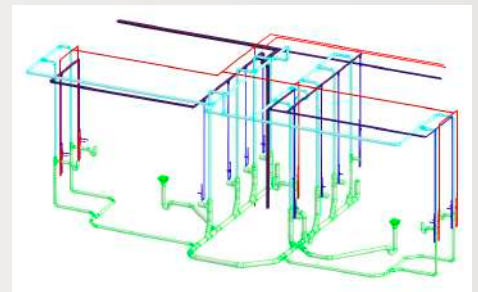

INDUSTRIAL:

Gained extensive experience modeling factories and mechanical piping systems using point cloud data. Delivered accurate as-built models and construction drawings (IFC), including tanks, pumps, and process lines. Coordinated disciplines using Navisworks and worked with Plant 3D for piping layouts and details.

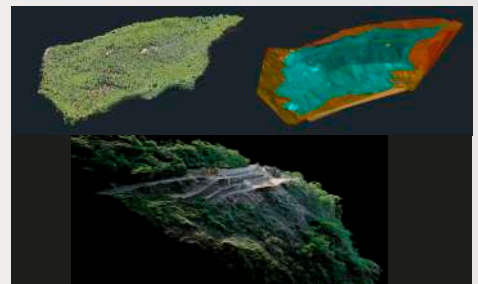

RESIDENTIAL & COMMERCIAL:

Modeled and documented various homes, residential towers, commercial buildings, and retail spaces. Developed strong multidisciplinary modeling skills (structural, HVAC, plumbing, electrical) at LOD 350. Proficient in creating parametric Revit families, custom templates, quantity takeoffs, and full drawing sets. Intermediate user of Dynamo for workflow automation.

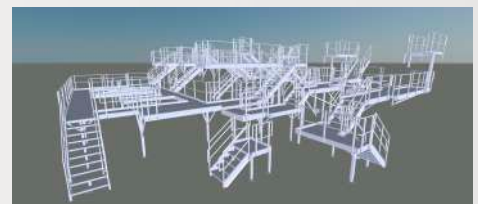

SURVEYING & TOPOGRAPHY:

Provided topographic and site survey services using drone RTK photogrammetry for early-stage architectural design. Delivered CAD terrain plans, UTM coordinate layouts, architectural base drawings, cross-sections, and 3D site isometrics. Completed 10+ topography projects, including two sites over 40 hectares.

METAL FABRICATION:

Worked on an 8-month structural steel fabrication project for a US-based client. Designed and modeled various industrial steel elements in SolidWorks, coordinating via Navisworks. Delivered detailed shop drawings, general assemblies, and fabrication documentation for manufacturing and site installation.
