EDUCATION

2006 - 2019 • John Dewey Matric Hr. Sec. School

2019 - 2024 • Rathinam School of Architecture And Design

EXPERIENCE

Architectural Intern-July 2023 - Oct 2023
Working Drawing For Residence - 3d Modelling - Interior Designing -
Site Experience
3D Rendering - 2D Photoshop Rendering

COURSER & WORKSHOP

2019-MUD WORKSHOP -POLLACHI

2022-THREAD WORKSHOP-COIMBATORE

2024-NOVATR-BIM PROFESSIONAL COURSE

HELLO!

I am an Architectural Graduate from Rathinam School of Architecture, known for being a reliable and dedicated worker. My expertise lies in designing both the structural and aesthetic elements of buildings. I have a deep passion for creative workflows, attention to detail, acquiring new skillsets, and expanding my knowledge in modern architecture.

PROJECT BRIEF

Overview:

Building name: Enzyme Towers

Project Address: Queens Road Central, Central District
Sheung Wan, Hong Kong.

Project Co-ordinates: N 22° 17' 5.40" E 114° 9' 12.12"

Building Type: Mixed Use (Office + Service Apts.)

Site Area: 203.7 m²/ 2,192.6 ft²

Gross Floor Area: 1430.7 m²/ 15,109.3 ft²

Height: B + G + 21 storeys

PROJECT DETAILS:

- FAR Permissible- 13.8
- FAR Achieved- 13.45
- Ground Coverage- 154 Sqm.
- Level of Detail- LOD 350

TOOLS USED:

- Revit- Modelling & Documentation
- Naviswork- Clash Detection, 4D simulation, Quantification
- Twinmotion- Rendering

PROJECT BRIEF:

- The project location is at the intersection of Wellington St. and Queens Road Central in the Central district of Hong Kong Island.
- The existing building, built in the '70s, doesn't maximize the current allowed GA of the plot.
- Given the prime location and the under utilized available GA, the owner wanted to set something different.
- The motive is to study the possibilities of another building volume that can provide a better ROI while creating a landmark in a critical urban point.

Concept Developing & Massing

Grand total: 2670 m ²	

Site Plan

Site Plan 1:200

The site is situated at a significant landmark junction, b/w Wellington St. and Queen Road Central. The lift lobby and a shared workspace with an office reception are located on the ground floor. Using custom templates, the floor plan was produced in Revit, with different lineweights and kinds assigned, levels marked, and room labels added.

After Revit was exported to Naviswork, all the necessary parameters were included.

- Next, sets of model elements in Naviswork were created based on the three disciplines of architecture, structural, and MEP.
- Lastly, distinct task sets were made in accordance with the particular requirements and tolerances to examine any conflicts across disciplines, and they were then resolved back in the Revit model using Switchback.

Foundation Plan

Urban Village

Urban Village, Bengaluru.

This building arrived from the concept of “Downdraught Effect” As a solution to the effect the constructor’s and architects using the methods like offsetting the building,softening the edges of the building Therefore in other hand the building is full of greeneries to tackle the climate crisis and making it as an sustainable building
